BRIEF HISTORY OF FEM

- Has been used since 1950's in solid mechanics
- in the 1970's FEM began to be used in CFD
- nowadays FEM is applicable to many engineering problems

Heat transfer, fluid flow, electromagnetic fields, solid mechanics, acoustics, biomechanics etc.

Finite Element Method - FEM

- strong math
- complex geometry
- element geometry
- master element
- high memory
- flexible

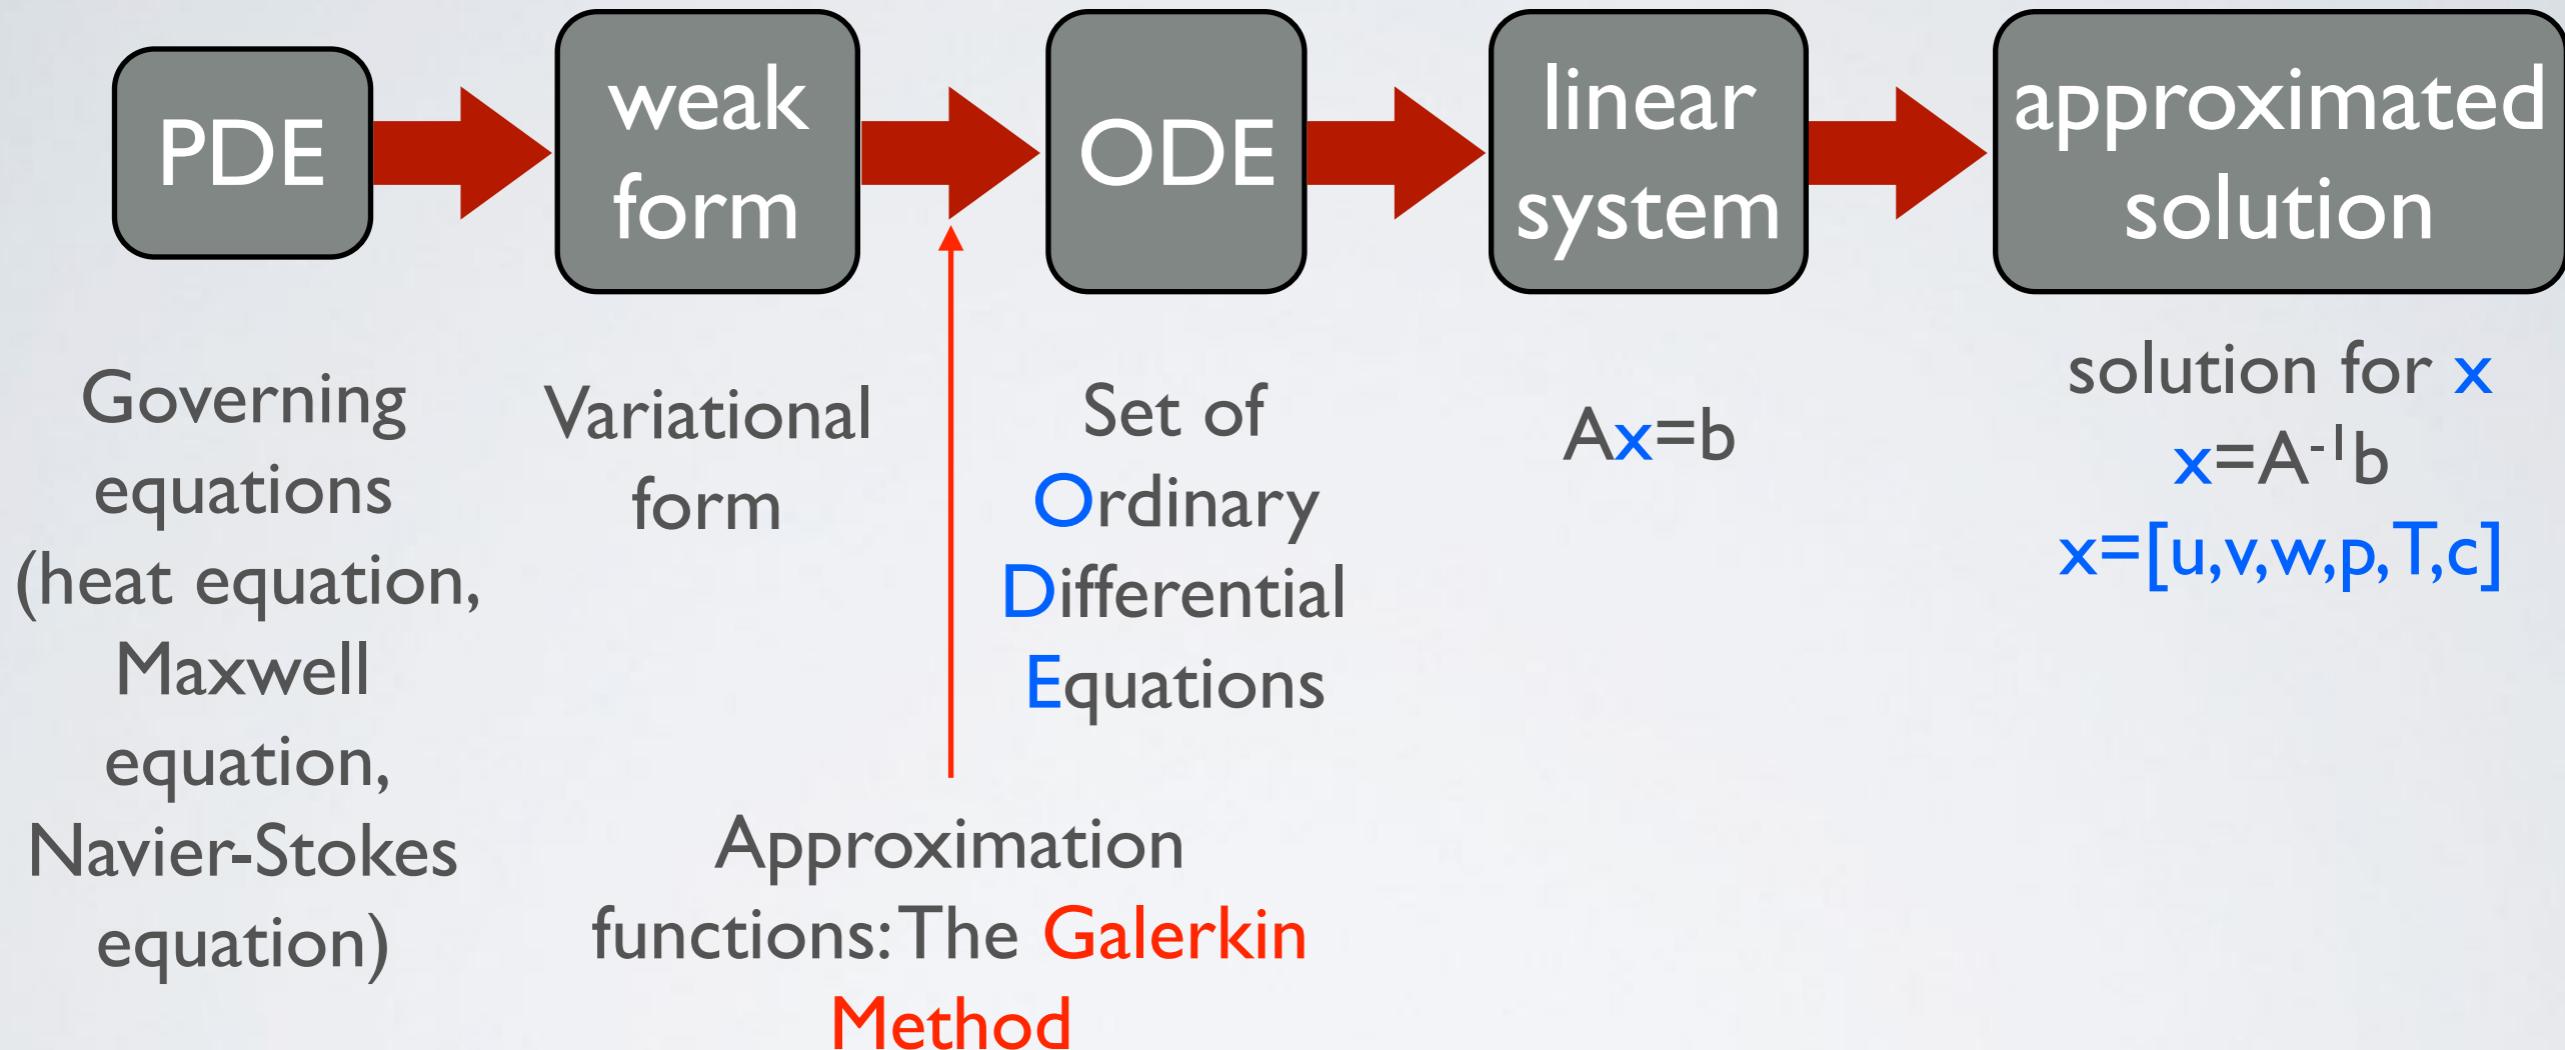

Finite Volume Method - FVM

- flux formulation
- complex geometry
- conservative
- low memory

Finite Difference Method - FDM

- easy math
- simple geometries
- grid systems
- low memory
- not flexible

FINITE ELEMENT METHOD

The approximation functions are combined with the weak form to obtain the discrete **finite element equations**.

CHOICE OF FUNCTIONS

Finite element function properties:

- the shape functions are 1 at the node and zero elsewhere;
- the sum of all shape function at the element is 1 everywhere, including boundary;
- the weight function is zero at boundary for Dirichlet b.c.

Chart:

| function | node, i | node, j | x |
|-------------|---------|---------|---------------|
| N_i | 1 | 0 | between 0 e 1 |
| N_j | 0 | 1 | between 0 e 1 |
| $N_i + N_j$ | 1 | 1 | 1 |

ID PROBLEM - STRONG FORM

Find u in $\Omega = [0, 1]$ such that:

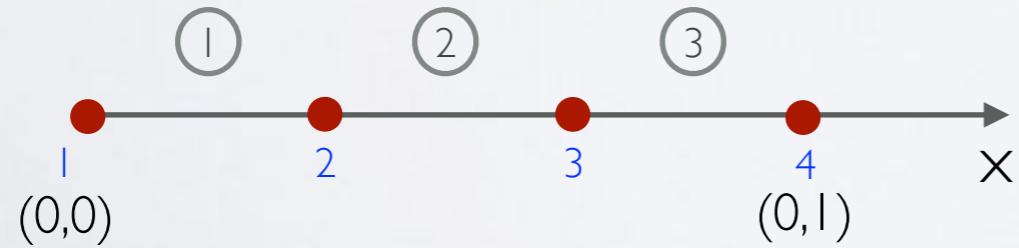

$$\frac{d^2u}{dx^2} + u + 1 = 0$$

$$\left| \begin{array}{l} u(0) = 0 \\ \frac{du}{dx}(1) = 1 \end{array} \right.$$

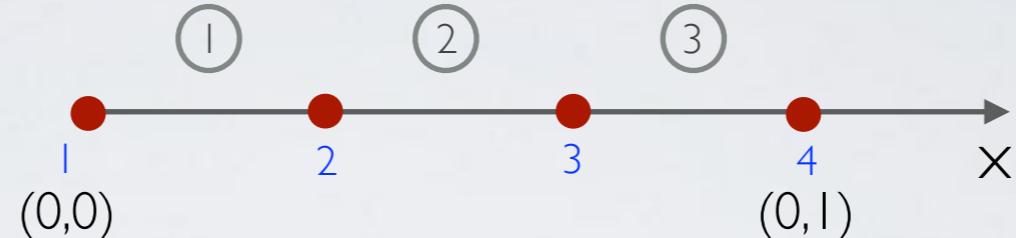

boundary
condition

domain: $h_1 = h_2 = h_3 = 1/3$

MESH GENERATION

mesh:

| element | node 1 | node 2 |
|---------|--------|--------|
| 1 | 1 | 2 |
| 2 | 2 | 3 |
| 3 | 3 | 4 |

ID PROBLEM - WEAK FORM

Find u in H^1 with b.c. such that:

$$\int_{\Omega} w \left(\frac{d^2 u}{dx^2} + u + 1 \right) d\Omega = 0$$

weight function

→ mathematical procedure (integration by parts)

$$\int_0^1 w \frac{d^2 u}{dx^2} dx + \int_0^1 w u dx + \int_0^1 w dx = 0$$

$$w \frac{du}{dx} \Big|_0^1 - \int_0^1 \frac{du}{dx} \frac{dw}{dx} dx + \int_0^1 w u dx + \int_0^1 w dx = 0$$

$$w \frac{du}{dx} \Big|_1 - w \frac{du}{dx} \Big|_0 - \int_0^1 \frac{du}{dx} \frac{dw}{dx} dx + \int_0^1 w u dx + \int_0^1 w dx = 0$$

ID PROBLEM - WEAK FORM

$$w \frac{du}{dx} \Big|_1 - w \frac{du}{dx} \Big|_0 - \int_0^1 \frac{du}{dx} \frac{dw}{dx} dx + \int_0^1 w u dx + \int_0^1 w dx = 0$$

apply boundary conditions to the equation
in the continuous form:

$$\cancel{w(1) \frac{du}{dx}(1)} - \cancel{w(0) \frac{du}{dx}(0)} - \int_0^1 \frac{du}{dx} \frac{dw}{dx} dx + \int_0^1 w u dx + \int_0^1 w dx = 0$$

$$w(1) - \int_0^1 \frac{du}{dx} \frac{dw}{dx} dx + \int_0^1 w u dx + \int_0^1 w dx = 0$$

GALERKIN METHOD

Approximate functions: $\hat{u} = \sum_{i=1}^4 N_i(x)u_i$ $\hat{w} = \sum_{j=1}^4 N_j(x)w_j$

$$w(1)\frac{du}{dx}(1) - w(0)\frac{du}{dx}(0) - \sum_{i=j=1}^4 \int_0^1 \frac{dN_i}{dx} u_i \frac{dN_j}{dx} w_j dx + \\ + \sum_{i=j=1}^4 \int_0^1 N_i u_i N_j w_j dx + \sum_{j=1}^4 \int_0^1 N_j w_j dx = 0$$

$$\sum_{i=1}^4 \sum_{j=1}^4 \left(\int_0^1 \frac{dN_i}{dx} \frac{dN_j}{dx} dx - \int_0^1 N_i N_j dx \right) \textcolor{red}{u}_i = \sum_{j=1}^4 \int_0^1 N_j dx + w(1)\frac{du}{dx}(1) - w(0)\frac{du}{dx}(0)$$

Replacing the shape function to the B.C.
Note that w_j is present at all members and can be removed!

$$\sum_{i=1}^4 \sum_{j=1}^4 \left(\int_0^1 \frac{dN_i}{dx} \frac{dN_j}{dx} dx - \int_0^1 N_i N_j dx \right) \underline{\underline{u}_i} = \sum_{j=1}^4 \int_0^1 N_j dx + \boxed{N_j(1)}$$

apply boundary conditions to the equation

$$\sum_{j=1}^4 \int_0^1 N_j dx + w(1) \frac{du}{dx}(1) - w(0) \frac{du}{dx}(0) = \text{right hand side } b_i$$

$$-u \quad 0 \\ w(1) \frac{du}{dx}(1) - w(0) \frac{du}{dx}(0)$$

$$\sum_{i=1}^4 \sum_{j=1}^4 \left(\int_0^1 \frac{dN_i}{dx} \frac{dN_j}{dx} dx - \int_0^1 N_i N_j dx \right) u_i + w(1) u(1) = \sum_{j=1}^4 \int_0^1 N_j dx - w(0) \frac{du}{dx}(0)$$

Replacing the shape function to the B.C.

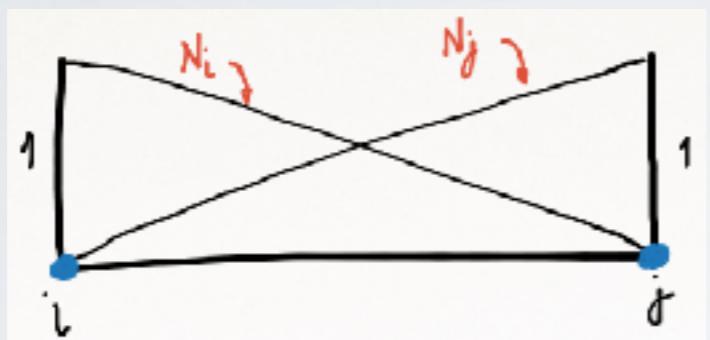

Note that w_j is present at all members and can be removed!

$$\sum_{i=1}^4 \sum_{j=1}^4 \left[\int_0^1 \frac{dN_i}{dx} \frac{dN_j}{dx} dx - \int_0^1 N_i N_j dx + N_i(1)N_j(1) \right] u_i = \sum_{j=1}^4 \int_0^1 N_j dx$$
